A lost walk in the midst of woodland, also mentioned by the famous poet William Wordsworth says that "the most beautiful specimen of a forest pathway ever seen by human eyes...". His signature was walks along Riverbanks. Starting at the church, the trail traversed the meadow and continued through old woods. Ascending the ever-narrowing path, the trail leaves the single-arch stone bridge and winds its way through woodland on higher ground. At last a spot is reached from where the faraway house and castle ruin stand out against a verdant ribbon of open meadow. On either side, there were clusters of towering Scots pine trees. The strategy aims to guide visitors along a journey through time, inviting them to reconnect with the historical significance of the landscape and restoring the panoramic vista from the elevated terrain where coniferous trees once thrived. Blooming in chains

In such an important area of a city, we need a community bond that does not repeat the history of pain and sorrow, but builds a transformed and renewed community center that becomes a cradle of neighborhood culture and local people's lives, in the form of landscape architecture that heals, as far as possible, the wounds of history on the city and the people who were enslaved.
